

Opening Remarks

3rd Summer School on High-Performance and
Disruptive Computing in Remote Sensing (HDCRS)

Jón Atli Benediktsson, Rector and President
University of Iceland

HÁSKÓLI ÍSLANDS

THE IEEE GEOSCIENCE AND REMOTE SENSING SOCIETY (GRSS)

The largest academic and professional Society with ~430,000 members in 160 countries

<https://www.grss-ieee.org/>

Location: All over the world

Beginnings: Founded in 1961

Mission: One of 39 IEEE Technical Societies. Fosters engagement for the benefit of society through science, engineering, applications, and education related to geoscience and remote sensing

Scope: Includes theory, concepts, and techniques of remote sensing of the Earth, oceans, atmosphere, and space, as well as processing, interpretation, and dissemination of this information

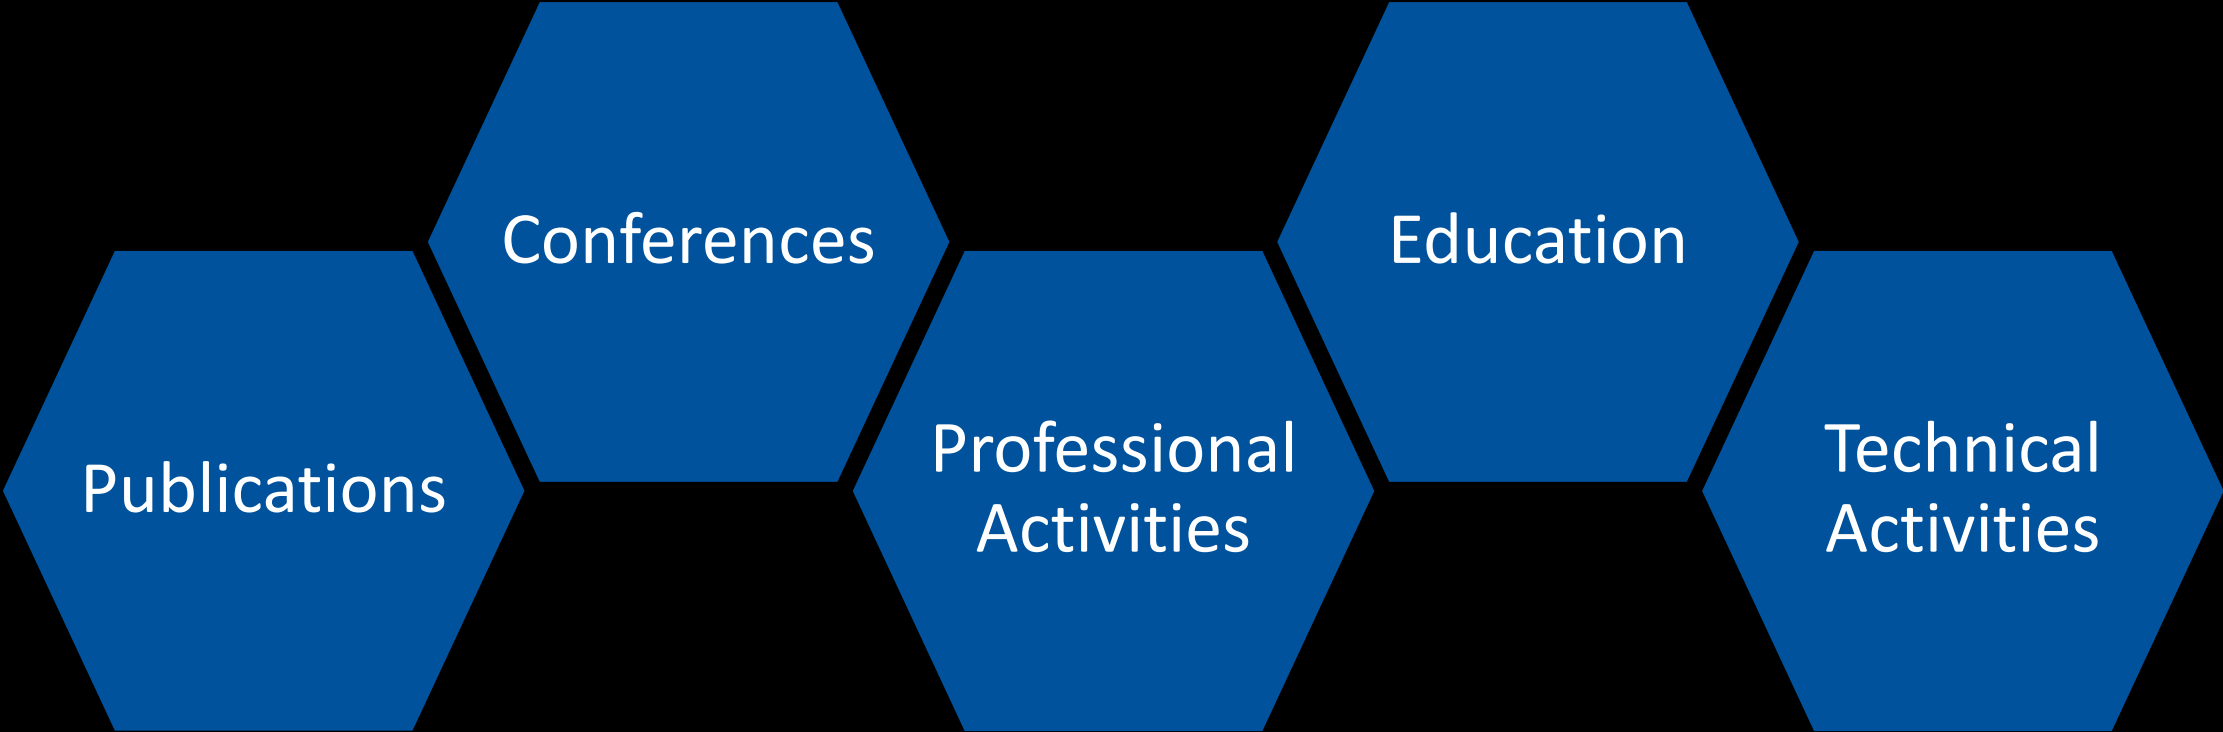

Members: ~5,000 members in 94 countries

Chapters: 69 chapters, 22 student chapters, and 11 ambassadors all over the world

Geoscience and Remote Sensing Society (GRSS)

GRSS Technical Committees

- ESI: Earth Science Informatics
- FARS: Frequency Allocation in Remote Sensing
- GRSS Standards for Earth Observations
- GSIS: Geoscience Spaceborne Imaging Spectroscopy
- IADF: Image Analysis and Data Fusion
- IFT: Instrumentation and Future Technologies
- MIRS: Modeling in Remote Sensing
- REACT: Remote sensing Environment, Analysis and Climate Technologies

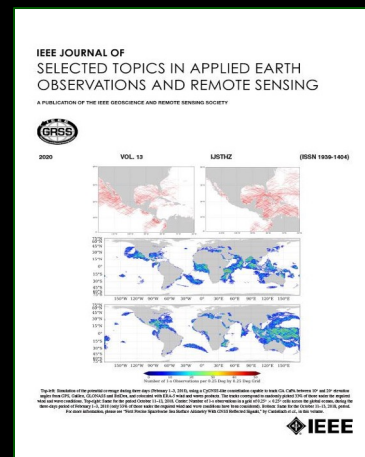

Example of activity:

<https://www.grss-ieee.org/technical-committees/image-analysis-and-data-fusion/?tab=data-fusion-contest>

GRSS Technical Publications

- TGRS: Transactions on Geoscience and Remote Sensing
- GRSL: Geoscience and Remote Sensing Letters
- J-STARS: Journal of Selected Topics in Applied Earth Observations and Remote Sensing
- GRSM: Geoscience and Remote Sensing Magazine
- RSCL: Remote Sensing Code Library
- J-MASS: Journal of Miniaturization for Air and Space Systems
- Conference Publication Committee
- Future Publications Committee
- Committee on Plagiarism

Why join the Geoscience and Remote Sensing Society (GRSS)?

To **share** your ideas, methods, and datasets, and to **stay informed** about recent developments and job opportunities in your field.

To **enjoy discounts** when publishing in our top-tier journals and joining our conferences.

To propose and lead **special topic journal issues** in our high-impact publications.

To make **GRSS funds** available **for students** (GRSS schools, IGARSS student grants, GRSS student grand challenges), **and young professionals** (GRSS sponsorship).

To give back to the community by attending or **organizing meetings** in your local GRSS chapter and promoting activities in your geographical area.

To **organize workshops and events** sponsored by GRSS through local chapters.

To foster **collaborations** that build **community** through standards and conferences.

To take part in **exclusive mentoring** and young professional activities.

To **meet other communities** and learn from their perspectives.

To **access valuable content** available to members on the [GRSS Resource Center](#), [IEEE Xplore](#), and [IEEE DataPort](#).

Undergraduate programmes

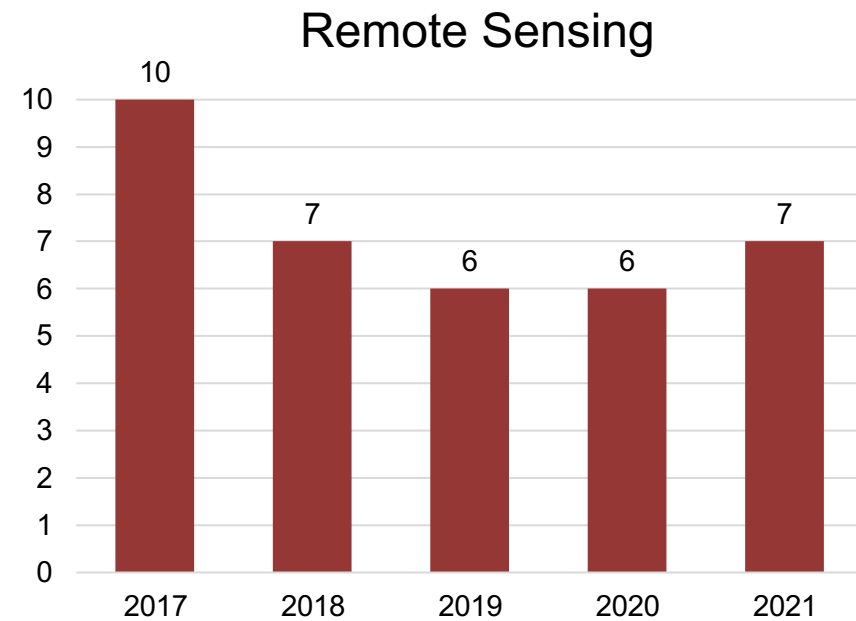

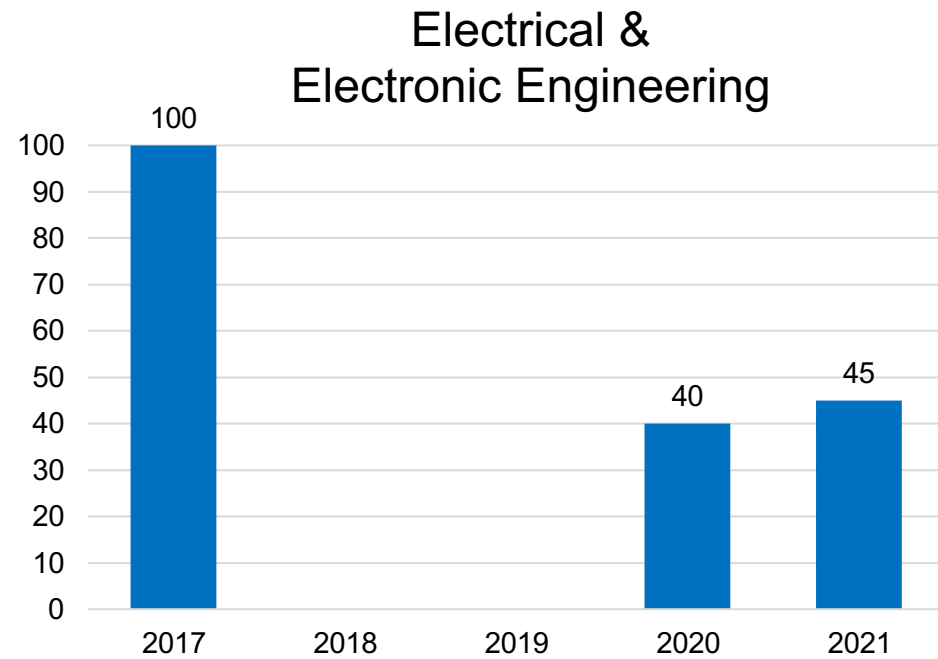

- Cartography (LAN102G, fall, 8 credits)
- Geological Mapping (JAR513G, fall, 7.5 credits)
- Geographical Information Systems 1 (UMV401G, spring, 6 credits)
- Machine Learning for Earth Observation powered by Supercomputers (REI506M, 6 credits)
- Remote Sensing and Environmental Monitoring (LAN616G, spring, 8 credits)
- Remote sensing and Geographical Information Systems in geological observations (JAR420G, spring, 7.5 credits)
- Remote Sensing and Processing of Remote Sensing Data (RAF512, fall, 10 credits)

Graduate programmes

- Remote Sensing and Processing of Remote Sensing Data (RAF512, fall, 10 credits)
- Application of Remote Sensing in Earth Sciences (JAR251F, spring, 7.5 credits)
- Geographical Information Systems 2 (LAN212F, spring, 10 credits)
- Remote Sensing and Environmental Monitoring (LAN211F, spring, 10 credits)
- Visualisation and Science Communication (LAN024F, spring, 5 credits)

UI'S POSITION ON ARWU SUBJECT RANKINGS

Electrical & Electronic Engineering and Remote Sensing

- Jülich Supercomputing Centre, Germany
- University of Extremadura, Spain
- University of Trento, Italy
- Grenoble Alpes University, France
- Hunan University, China
- University of Genoa, Italy
- Purdue University, USA

Simulation and Data in Remote Sensing

Jón Atli Benediktsson

Gabriele Cavallaro

Morris Riedel

(plus 5 PhD students, 1 Postdoc and master students)

- International cooperation with the Jülich Supercomputing Centre (Forschungszentrum Jülich, Germany)
- Joint activities that include research projects, teaching courses, community support and supervision of students at different academic levels

Jülich Supercomputing Centre, Forschungszentrum Jülich, <https://www.fz-juelich.de/en/ias/jsc>

School of Engineering and Natural Sciences, University of Iceland, https://english.hi.is/school_of_engineering_and_natural_sciences

SDL AI and ML for Remote Sensing, <https://www.fz-juelich.de/en/ias/jsc/about-us/structure/simulation-and-data-labs/sdl-ai-ml-remote-sensing>

Simulation and Data Lab Remote Sensing, <https://ihpc.is/simulation-and-data-lab-remote-sensing/>

Why using High-Performance Computing (HPC)?

A futuristic server room with glowing blue lights and data visualizations. The room is filled with rows of server racks, each with a glass door showing internal components. The floor is highly reflective, mirroring the lights and the racks. The ceiling has recessed lighting panels. The overall atmosphere is high-tech and digital.

✓ Benefit #1: Faster Training of AI Models → Speed-up!

High Performance Computing (HPC) & Supercomputing

Multi-Core CPUs as Cluster

Large number of processors with high single thread performance and cache hierarchies

Additional Many-Core GPUs

Accelerators attached to host CPUs with moderate speed, but 100 - 1000

Fast Interconnects

Cluster nodes interconnected with a low-latency high-bandwidth network (e.g. Infiniband)

Parallel Programming Environment

Schedulers, monitoring systems, parallel libraries

Parallel File Systems & Storage

Using binary parallel file formats & large storage capacities on different levels (NVRAM, Disk, Tapes)

Building Infrastructure

Cooling, cables, fire safety, etc.

Parallel & Scalable Machine & Deep Learning – AI & Big Data needs HPC/Clouds

Morris Riedel @MorrisRiedel · Mar 21, 2019
 Video of my talk @ Deutscher Bundestag German federal parliament now at dbtg.tv/cvid/7332302 discussing among #ArtificialIntelligence experts HAICU @helmholtz_en SMITH, ON4OFF & Modular Supercomputing by @DEEPprojects @fzj_jsc @fz_juelich @uisens @uni_iceland @Haskoli_Islands

Octave

→ 'Big Data'

Summary and Outlook

- HPC needed for science & engineering
- Industry usage of HPC can be advanced

- Landscape of HPC gets increasingly complex
- Large inter-disciplinary teams strive

- Wide variety of great tools exist for HPC
- Mastering the toolsets is not trivial

Research challenges: Handle complexity of domains + AI + HPC via Interaction Rooms & Software Engineering Approaches

Urgent need of more HPC experts on the intersection of AI, HPC and specific scientific & engineering domains 'finding good talent in HPC is a world-wide problem we all face in academia (PhD recruiting problem)'
